# HOW THE BULLS HAVE BEEN MANAGED

The Bulls were grouped together in large grass pastures in late July, and fed a high roughage ration, and free choice grass hay for 84 days. The purpose of this feed test is not to obtain maximum gains and high yearling weights, but to develop a sound, functional, athletic set of breeding bulls. Yearling weights and ultrasound carcass measurements were taken in November and processed by the American Angus Association. The Bulls have been on a limited high roughage ration with free choice grass hay since November 5, 2011.

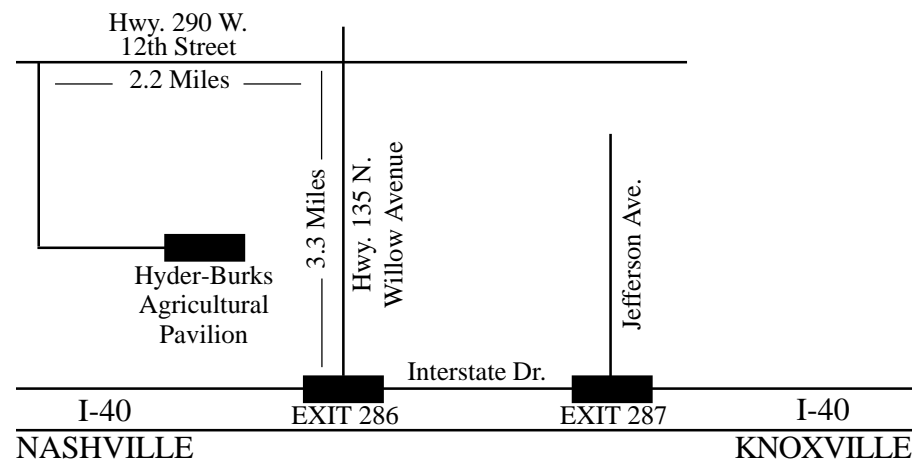

Genetic Excellence Bull's Health Program 2-3 weeks prior to delivery - Vaccinated with Bovi - Shield Gold FP 5L5 and Ultrabac 8. At delivery given a booster vaccination of Bovi-Shield GOLD FP 5L5, Ultrabac 8, and dewormed with injectable Dectomax. 30 days prior to sale the bulls were given a booster of Bovi-Shield GOLD FP 5L5 HB, Ultra Choice 8, and dewormed and deliced with injectable Dectomax. Plus two rounds of TrichGuard.
